

Thermo Scientific Synchronis C18 HPLC Columns

Consistent, predictable separations,
Column after column, time after time

- Outstanding reproducibility
- Highly pure, high surface area silica
- High carbon load for increased retention
- Double endcapped for extra surface coverage
- Highly inert towards basic compounds
- Rigorously tested to ensure quality

Specifications

Particle size	1.7 µm, 3 µm, 5 µm	Carbon load	16 %
Pore size	100 Å	Endcapped	Yes
Surface area	320 m ² /g	USP classification	L1
pH range	2-9		

Column	Retention Time (min)	Efficiency	Peak Area
1	25.82	62069	11532105
2	26.03	61688	11543904
3	25.90	62657	11527718
4	25.66	61317	11463444
5	25.92	63142	11520618
Inter-column precision (% RSD)	0.52	1.18	0.27

Outstanding column to column reproducibility

When developing a new method, one of the most important goals for the chromatographer is to achieve a consistent, reproducible separation. The selection of a highly reproducible HPLC column is essential if this goal is to be attained.

Thermo Scientific™ Synchronis™ C18 HPLC columns show excellent column to column reproducibility, as illustrated here by the analysis of zidovudine using five separate columns.

The reproducibility in terms of retention time and peak area is less than or equal to 0.5%, column to column. This indicates that the columns are well packed.

The variation in peak area is 0.27%, which is important for quantitation of analytes.

Synchronis C18 HPLC columns achieve this goal, starting from the highly pure, high surface area silica and dense bonding, all controlled and characterized through the use of rigorous testing.

New, enhanced, automated column packing methods drive consistency even further and every column is individually tested to ensure that it meets the required specifications. These extensive testing and quality control procedures ensure the delivery of a consistent product, column after column.

Column:

Synchronis C18 5 µm, 250 mm x 4.0 mm
water:methanol (4:1)
1.0 mL min⁻¹
25 °C
265 nm
10 µL

Application: Chloramphenicol (USP)

Column: Synchronis C18 5 µm, 100 mm x 4.6 mm
Mobile phase: water:methanol:glacial acetic acid (54.9:45:0.1)
Flow rate: 1.0 mL/min
Temperature: 25 °C
Detection: 280 nm
Injection volume: 10 µL

1. Chloramphenicol

Parameter	USP Specification	Measured (6 replicate injections)
Efficiency (N)	> 1800	6164
Tailing factor	< 2	1.06
%RSD retention time	< 1%	0.03%
%RSD peak area	< 1%	0.32%

Consistent, predictable separations: Column after column, time after time

Synchronis HPLC columns are manufactured, packed and tested in ISO 9001:2008 accredited facilities. Each lot of silica is tested for the physical properties of the silica support and only released for production if it meets the stringent test specifications.

Each bonded lot of chromatographic packing material is rigorously tested for primary and secondary interactions with the bonded phase.

New, enhanced, automated packing methods drive consistency even further and every column is individually tested to ensure that it meets the required quality.

These extensive testing and quality control procedures ensure the delivery of a consistent product, column after column.
